

## 1727 MILES PER GALLON

**Peter Willett and his dedicated team have achieved an amazing 1726 miles per gallon thanks to Ecoflow.**

**On July 17th I gave the Ecoflow its first major test since the DTI report. I and my team of volunteers entered the Shell Motor Mileage Marathon at Silverstone racing circuit. The aim, to achieve as many miles per gallon as possible. The vehicles have to be powered by Shell unleaded petrol, have a minimum of three road wheels and complete a ten mile course in a minimum of 15 mph. Fuel is measured and the temperature taken at the**

**start and finish (to allow for expansion). Three measured runs are allowed during the day.**

**I have entered the car in various configurations over the past eighteen years and until this year our best recorded mileage has been 1,547 mpg (1981). Last years result was 1,289 mpg which was the highest in recent years for our car. However, this year we achieved a recorded mileage of 1,727 mpg, unfortunately we only came 26th out of an international field of 96, but we were pleased as we only have my garage to use to work on the car, and apart from one donation this year, we have not had any serious backing for many years.**

**This mileage can be officially recorded in Ecoflow's achievements data as the car was fitted with an Ecoflow 4 on the run. Next year is looking good for the car. Watch this space!!**
